The purpose of the research was to build a community poverty indicator, through spatial analysis and multivariate analysis, applicable to any space with important rural component. The research also led to the elaboration of models of community development diffusion in the territory, as well as to the creation of solutions to reduce the territorial gap. Hence, the project became very useful in the implementation of territorial balanced development policies. The research findings made the object of</i></p> | 2008-2010 | 40.000 | 1 |

Researcher.

Project description: The main objective of the project was to pinpoint the particularities of marginalizing the Roma communities in five Romanian regions. In the pilot areas selected in the study, we have conducted investigations, data collections and we elaborated indicators to pinpoint the specific segregations forms. In the final part of the study, we elaborated an atlas with themed and synthetic maps, with the purpose of benchmarking the spatial dimension of ethnical segregation.
